Available for Adult, Paediatric, Infant, and Neonatal  
Applications for Cerebral and Somatic Monitoring Sites

# O3 Regional Oximetry

O3 Regional Oximetry monitors the regional haemoglobin oxygen saturation of blood (rSO<sub>2</sub>) in the region of interest for infant, neonatal, paediatric, and adult patients.<sup>1-4</sup>

With their flexible design, O3 sensors easily conform to and allow for ergonomic application.

# Expansion with Root

The expandable, versatile, and customisable Root patient monitoring and connectivity platform allows O3 Regional Oximetry to be combined with other monitoring modalities and, with the addition of Iris® Gateway, automatically charts patient data in electronic medical records (EMRs).

## Expanded Visibility of the Brain

*Root with O3 Regional Oximetry and Next Generation SedLine® Brain Function Monitoring provides a more complete picture of the brain*

Root with **Next Generation SedLine brain function monitoring** helps clinicians monitor the state of the brain under anaesthesia with bilateral data acquisition and processing of four leads of electroencephalogram (EEG) signals, enabling continuous assessment of both sides of the brain.

Streamlined design allows simultaneous application of SedLine and O3 sensors

When used together on Root, SedLine and O3 provide a more complete picture of the brain on an instantly interpretable, integrated display.

Patient State Index, PSI, a processed EEG parameter related to the effect of anaesthetic agents

Density Spectral Array (DSA) display contains left and right spectrograms representing the power of the EEG on both sides of the brain

rSO2 provides tissue oxygen saturation

## Expanded Visibility of Oxygenation Status

*Root with O3 Regional Oximetry and Masimo SET® Pulse Oximetry (SpO2)*

O3 is displayed with Masimo SET® pulse oximetry on Root, providing clinicians with expanded visibility of a patient's oxygenation status.<sup>6</sup>

## Expanded Visibility of Patient Data

*Iris® Gateway for Advanced Connectivity and Interoperability*

Integrate data from Root and third-party devices using Iris ports for automated charting in EMRs.

Data from Root and connected third-party devices

Device data and alarms are automatically charted in EMRs

## Expanded Visibility Through Supplemental Display

UniView® aggregates data and alarms from multiple Masimo and third-party devices – such as patient monitors, ventilators, anaesthesia machines, IV pumps and others connected through Masimo systems – on a supplemental display.

- > Integrated real-time data visualisation reduces cognitive overload and promotes data sharing among multiple clinicians, helping them to spot trends and coordinate care
- > Visual alarm indicators, relayed from connected devices, help care teams recognise patient distress and target areas for clinical focus
- > Tailored use-case-specific screen layouts optimise the presentation of advanced and integrated parameters, trend data, and waveforms in critical care areas
- > Adaptable layout automatically reconfigures based on connected devices

**Kite**® expands visibility by providing a supplemental display of patient data from Root, with the ability to customise the layout differently from Root.

By allowing customisation of what can be displayed, Kite allows clinicians to focus on the most pertinent data for each stage of a patient's journey, empowering them to make more informed decisions.

With Kite, all clinicians in the OR can view brain monitoring information instantly, simultaneously.
